1. Read IFO file to extract chapters' timing and output new INI file. 2. Find the chapter you want to synchronize with, and output a new INI file that will put in the new timing of that chapter. 3. Make a new INI file (with a new name) that will include the old INI and a new section named CHAPTERS. The new section CHAPTERS will have the chapters included, a start frame, and chapter name. 4. You can add an offset to adjust timing. If you use a time based format (like with SVCD), the offset is specified in ms. 5. When you use a time based format (like with SVCD), the offset is specified in ms. 6. You can synchronize this result with an AVI file, so the frame number for a chapter will be the nearest key frame. This allow fastest seeking with the AVI

file. 7. Last chapter bug fix (with support for some DVD V2 IFO format): 1.It's possible to have a last chapter that it's not exist. This is one of the most interesting feature of v2 IFOs. The way ChapterXtractor Free Download handles these new IFO is not very good. I mean, it's not the first time I have such a case. Usually they are the blank titles that are not really chapters. My solution is to check if there is a valid last chapter in the IFO (not blank) and if the last frame's duration is bigger than 5s (to allow 10s pause between chapters). If so, it will be removed and the program will use the previous valid last chapter. I hope you'll like this feature, it's not well know and it can make DVD's your life easier.What the French term as "leopardskin" would be in English, it is often referred to as leopard print. This textile pattern has been in existence since the early nineteenth century. It is believed to be derived from the leopard's spots, and was used in India and Afghanistan. Leopard print is available in various patterns. These include, but are not limited to, geometric prints, applique, and stamping. It may have several colors, or it may be limited to only a few. There are a lot of prints that can be worn with just a small amount of clothing. It is the perfect alternative for

## ChapterXtractor

ChapterXtractor is a small, simple, easy-to-use tool made to extract chapters' timing from IFO files. It can be used to generate part of the INI file for Micro DVD Player. The result look like this in Micro DVD format : [CHAPTERS] 1=0 Chapters 1 2=6213 Chapters 2 3=8726 Chapters 3 4=12665 Chapters 4 You can add an offset (in frames) to adjust timing. Also, you can synchronize this result with an AVI file, so the frame number for a chapter will be the nearest key frame. This allow fastest seeking with the AVI file. When you use a time based format (like with SVCD) the offset is specified in ms. Like this format is not key frame based the AVI video file is not use. On some DVDs, the last chapter doesn't exist really. (in fact it's probably a logo, so check it length). ChapterXtractor (when you check 'Last chapter bug fix') will auto disable last chapter if it's length is less than 5s. danielamme

====Update====

ChapterXtractor Version 1.7 -Fixed bug in bugfix of last chapter (now it's possible to disable last chapter manually) -Fixed bug where chapterXtractor use milliseconds and not frames (after this fix, all chapter

must be synchronized with keyframes)  
danielamme The dvd library (download from [www.libdvdread.org](http://www.libdvdread.org)) uses the same method for grabbing the chapter/subtitle timing as chapterXtractor (so you can use them both). However the dvd library is very flexible, and allows a lot of command line options. And it's much smaller and faster. (and it's open source) @Schist is right. There is also another way to do this if you don't have a microdvd player. Check chapterXtractor for more info about the txt file. You can also try this v.1.0.1 Update 1 : You can also try this new version of the chapterxtractor. I don't know it's accuracy or quality. AOP\_Gen. This is a new version that uses more information from the INI file. So it works on all DVD with INI information. It
