Yes Keymacro will allow you to use the LCD keys on your Stream Deck controller to perform a variety of actions when you press specific keys. This application will tell you exactly what each key does, and you can configure the Stream Deck controller to perform these actions on your Stream Deck device. Some more information: Is Keymacro compatible with Stream Deck? Yes Is Keymacro compatible with Stream Deck controller? Yes Keymacro is a universal desktop application that will allow you to assign a hotkey to any of the buttons on your Stream Deck controller. It will let you choose what action to perform when a certain key is pressed, as well as perform other operations when you hold down more than one key. The application can work on 2edc1e01e8

Stream Deck License Key

The Stream Deck controller is intended to provide you with a quick way to trigger certain actions without using confusing keyboard shortcuts. It has 15 customizable keys with LCDs, which can be configured using this desktop application. How the Stream Deck controller can help you: The controller is, essentially, a miniature keyboard with LCD keys that can show you exactly what action each of them will trigger. There are 15 keys to work with, which should be enough for any streamer. While you can bind these actions to hotkeys on your main keyboard, it is easy to lose track of that each key combination is for, and things can get very confusing if you decide to switch something up. Assign various actions to each key on your Stream Deck device: The application displays the layout of the controller in the main window, and you can drag actions from the right-hand panel to assign them to any of the keys. The program supports multiple streaming platforms, and you can also assign Twitch, YouTube or system actions. A default icon will be added to each key, and you can also provide a name that will help you identify it more easily. What's more, it is possible to add a custom icon or create a new one from scratch. Configure your Stream Deck device in no time at all: Whether you're an experienced streamer or just getting started, this controller can make your life a lot easier. It puts a total of 15 actions at your fingertips, without having to remember confusing key combinations. If you've gone ahead and purchased a Stream Deck device, this application will let you set it up in just a few minutes. It is very intuitive and offers support for multiple streaming platforms. Features Properly stream the game with the correct network connection The Stream Deck controller allows you to stream games at full resolution (such as at 4K). You can also select which game you want to stream, and you'll be notified when you launch a game. Record and broadcast your content The Stream Deck controller supports recording and streaming, and it can detect when you're broadcasting. While you can record video with a connected camera, you can also record with a connected mic, and there is a microphone port on the device. You can also use the Stream Deck controller to broadcast other content to your viewers. This way you can have a chat window open in your stream without disrupting the gameplay. Import your own Steam libraries The Stream Deck controller supports importing
